

Connect the records. Never guess the person.

Same records. Different workflow. A source-cited candidate connection and a deterministic stop.

SUPPORTED FOR AUTHORIZED REVIEW

FAMILY-018 <-> SHELTER-204

Compatible age and traceable supporting fields. A possible connection only - never identity confirmation.

BLOCKED BY DETERMINISTIC CONFLICT

FAMILY-018 <-> HOSPITAL-052

Age 14 conflicts with document-backed age 24. The model cannot override the material-conflict gate.

Prompt iteration: completion did not outrank precision

COHORT	PROMPT	OK	TP / FP / FN	PRECISION	RECALL	F1
Targeted 19	V1	19/19	56 / 4 / 9	0.9333	0.8615	0.8960
Targeted 19	V2	19/19	58 / 2 / 7	0.9667	0.8923	0.9280
Full 58	V2 / production	57/58	157 / 30 / 25	0.8396	0.8626	0.8509
Full 58	V3 / not promoted	58/58	161 / 78 / 21	0.6736	0.8846	0.7648

PRECISION_REGRESSION / V3 NOT PROMOTED

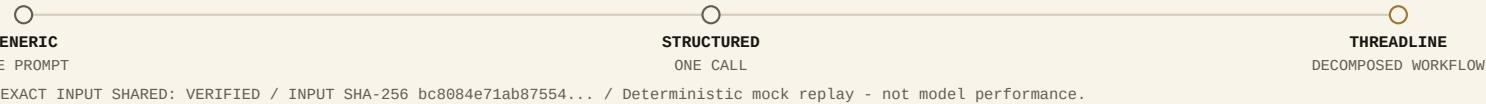

V3 raised recall but produced 78 false-positive fields versus 30 for V2; precision and F1 regressed on the same 58 records.

No full 58-record V1 live artifact exists; no three-way same-cohort ranking is claimed.

Measured boundary

- Prompt V2 archived run: 4 link-recommended candidate pairs; 0/8 observed false merges.
- False non-links remain visible: 10 across 14 same-identity opportunities.
- Blocking-conflict recall: 1.000. Approximate API cost: Not measured.

SAME-INPUT DESIGN / DETERMINISTIC MOCK REPLAY3 RECORDS / deterministic-fixture / TEMP 0.0

FIVE-STAGE WORKFLOW

Conflict + rival

05

CONTRACT

Withhold / review

MEASURED LIMITS

- Synthetic records only; no operational humanitarian validation.
- Zero observed false merges is 0/8 - a small denominator, not a safety guarantee.
- One archived live-provider run; repeatability intervals are not measured.
- No live same-model one-shot comparator; approximate API cost not measured.
